|      |          | SUBJECT:   | The Modified l<br>Coherent Light  | Photomicrographi<br>Enlarger  | c Enlarger an   | d The   |  |                    |
|      |          |  |   | -   |   |   |  |                    |
| 25X1 |          | 1. One modified Photomicrographic Enlarger was available for our inspection. In general, the unit was well constructed and is a definite improvement on the prototype previously demonstrated  |   |   |   |   |  |                    |
|      |          | at NPIC. The working top, or stage, has been coated with white porcelain. This coating has dual advantages in that it prevents scratching of the film and acts as a reflecting surface against which the film can be viewed prior to orienting it under the projection head.   |   |   |   |   |  |                    |
|      |          | 2. An exposure meter has been incorporated into the equipment by means of a beam splitter inserted in the optical path. The light intensity scale graduations, on the model demonstrated, were not properly calibrated for the material we were using; however, a calibration adjustment screw is provided. The meter reading permits the first exposure setting to be correct or very nearly so the first time an exposure is made. |   |   |   |   |  |                    |
